TOUR THE FRONTENAC ARCH BIOSPHERE RESERVE

JOIN US FOR A DAY!

Explore a paradise of Ontario's breath-taking autumn palette of colours and discover the geodiversity within the Arch Biosphere Reserve hosted by two very distinguished Field Tour Guides.

This tour provides an overview of geodiversity within the Arch Biosphere Reserve and demonstrates earth-science principles to those with little or no previous geological training.

Learn how the Champlain Sea was created, what occurred during the last ice sheet (melt), and specifically, the underlying geology of the Frontenac Arch, an extension of the Canadian Shield, sedimentary rock, and its' unconsolidated cover.

This tour not only provides a summary of our geological history, but how it impacts us today.

Dress accordingly in comfortable clothing and shoes. Tour entails some walking and hiking over rocks that enable you to see a panoramic vista of the Thousand Islands.

Registration: \$25.00 per person

Departs & Returns at Food Basics, Brockville, ON

Tour Includes:

- 8 Points of Interest
- Coach Bus with amenities
- Box Lunch & Refreshments in the Park
